Research & Professional Platforms

"Science is a collaborative effort. The combined results of several people working together is often much more effective than could be that of an individual scientist working alone."

I actively engage with a wide range of professional networks, academic databases, design & visualization tools, development environments, simulation software, and productivity platforms to support my research in metamaterials, 3D printing, shape memory materials, and advanced manufacturing.

This page provides links to my profiles and the key tools I use daily for collaboration, publication, prototyping, data analysis, and dissemination.
